

Treatment Threshold  
= 9 Greenbugs/Tiller

Spring  
Edition

Prepared by Tom A. Royer and K.L. Giles,  
Oklahoma State University,  
and N.C. Elliott, USDA-ARS, Stillwater, OK.

- ▶ To sample the wheat field, use a “zig zag” or “W” pattern and walk at least 15 steps (about 30 ft) between stops.
- ▶ Carefully pull and examine 3 tillers (stems) per stop, taking one tiller from the left, right, and front.
- ▶ At each stop, color in the leaf for each tiller that has one or more greenbugs on it, and keep a running total. If the number of infested tillers is less than or equal to the number in the “Don’t Treat” column then stop sampling, and do not treat. If the number of infested tillers is equal to or greater than the number in the “Treat” column then stop sampling, and treat the field. If the number falls within the numbers listed in the “Keep Sampling” column, continue sampling until a decision can be made, or the “Stop Sampling” box has been reached.

- ▶ Do not spray if most of the greenbugs are mummies.
- ▶ Recheck the field in 2-4 days if no or very few mummies are present.

Issued in furtherance of Cooperative Extension work, acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture, Sam E. Curl, Director of Oklahoma Cooperative Extension Service, Oklahoma State University, Stillwater, Oklahoma. This publication is issued by Oklahoma State University as authorized by the Dean of the Division of Agricultural Sciences and Natural Resources. 0502 JS.

Stop every 30 ft. and look at 3 tillers Mark a leaf for each tiller that has 1 or more greenbugs						Total tillers with 1 or more greenbugs	Don't Treat ▼	Keep Sampling ▼	Treat ▼
Sample ▼	Stop 1	Stop 2	Stop 3	Stop 4	Stop 5				
Tillers 1-15 ▶						▶ /15 ▶	8 or less	9-15	N/A
Tillers 16-30 ▶						▶ /30 ▶	22 or less	23-30	N/A
Tillers 31-45 ▶						▶ /45 ▶	35 or less	36-44	45
